

EHang, a Chinese tech developer may soon fly a passenger aircraft that is totally automated. So far, negotiations with the state of Nevada are ongoing for test flights near Las Vegas of what is called the EHang 184 Autonomous Aerial Vehicle.

Of course, before any scheduled passenger flights, every possible problem will be eliminated. Therefore, on future journeys, as you sit in your seat when the plane descends, you'll hear the automatic pilot assure of a safe landing. "Please fasten your seat belts as the aircraft performs a (blonk) per (bloop) fect (blurp) land (blinch) ing (crunch) in Las Veg...(smooosh).
